Master of Cybersecurity Management

As technology and cybersecurity threats continue to grow and evolve, so does the need for highly skilled cybersecurity leaders who can direct and protect critical information infrastructures. Securing an organization's data requires a refined combination of technical skills, managerial acumen, and leadership expertise.

The Master of Cybersecurity Management at Washington University is a 30-unit part-time program designed for working professionals. This program was developed with one critical goal: to educate mid- and senior career professionals in the management of the people, technology, and resources necessary to lead cybersecurity organizations.

The curriculum provides students with the knowledge needed to protect from, defend against, respond to, and recover after cyber threats and to manage the organization's risk exposure. Graduates of this program will be equipped to solve complex cybersecurity problems and ensure the enterprise's ongoing vitality and prosperity.
