## Research

### Mentored Research

All students enrolled in the Mentored Research course will complete a master's thesis, which may involve conducting and reporting a comprehensive data analysis or conducting research and reporting on a focused methodological problem; the latter may include a computer simulation approach to solve a problem, an in-depth review of available methods in a certain topical area, or the development of new methods. Each student will work closely with a mentor with expertise in biostatistics or a related quantitative field. The grade for each student will be determined in consultation with the mentor.

### Internship

The primary goal of the Internship program is for all students enrolled in the Internship to acquire critical professional experience so that they will be well-prepared to enter the job market upon graduation. This provides an opportunity for students to test-drive the job market, develop contacts, build marketable skills, and figure out likes and dislikes in the chosen field.
