

A&S Integration: Integrated Inquiries

This page documents integrated inquiry (IQ) programs currently designed and approved to fill Arts & Sciences integration requirements.

Twentieth-Century Political Dynamics (HUM, LCD, SSC)

What were the major events, personalities, and struggles of 20th-century international history? How do we explain or interpret them? What was their significance, and what were their enduring legacies for world and regional politics? This IQ explores these issues through courses that examine central institutions, social movements, and regions in global affairs. Students will deepen their historical and/or theoretical understanding of current issues. They will also gain a greater appreciation of what happened in the past and how it continues to shape the present in important ways.

Note: Students complete two courses, each from a different department outside of their major.

Along the Silk Road (HUM, LCD, SSC)

How were civilizations connected throughout history? How did societies from East Asia, Central Asia, the Near East, and Europe shape each other's material and ideological worlds? The "Silk Routes" comprised one of the most extensive and diverse networks of trade and social interaction in history. The exchange and diffusion of material culture, technological innovations, ideology, food, and social institutions across this vast overland system resulted in the growth and development of societies from Japan to Europe and everywhere in between. This IQ is designed to provide students with a multidisciplinary view of the history of Eurasia in light of major transformations in art and archaeology, religion, political organization, and literature that linked Eurasian societies within a wider world system.

Note: Students complete two courses, each from a different department outside of their major.

The Americas (HUM, LCD, SSC)

What shared histories of indigenous settlement, colonialism, and nation-building unite the Americas as the "New World" that sparked the imaginations of so many travelers, immigrants, and empire builders of the past and present? How do the Americas today reflect this shared history yet also reveal vast differences in cultural tradition, wealth and inequality, and visions of the future? This IQ will allow students to explore a range of historical roots: from pre-European empires and worlds of indigenous peoples to the revolutionary struggles of the 18th century and the rise of nation-states. Students may also delve into the political and cultural complexities that shape the Americas today. Across these histories, this IQ draws attention to struggles over identity and resources that lay the foundations for the Americas as we know them today and to the rise of ideas and institutions that shaped these places in very different ways over the centuries. By completing this IQ, students will gain a deeper understanding of their own place in the Americas and of the ways that scholars of different disciplines engage the social, historical, and political-economic complexities of world regions.

Note: Students complete two courses, each from a different department outside of their major.

Arts and Society (HUM, LCD)

How do the performed arts (dance, music, and theater), the visual arts, and the cinematic arts relate to the societies in which they are practiced? What roles do they play in the formation of individual or social consciousness? How is the practice and understanding of these arts influenced by what happens in the social context? Answers to these questions vary from art to art and society to society, so the courses in this IQ focus on the historical development of artistic practices within particular cultures and the ways in which such practices function in the development of particular societies. By completing this IQ, students will develop language with which to analyze acts and works of nonliterary art and gain a richer understanding of how these arts function in people's lives.

Note: Students complete two courses, each from a different department outside of their major.

The Culture of European Modernity (HUM, LCD)

How did artists and intellectuals respond to the social, political, and economic transformations that swept through 18th-, 19th-, and 20th-century Europe? The courses in this IQ investigate some of the remarkable cultural and intellectual innovations of this tumultuous period and also attempt to situate them within their broader social and historical contexts. Students who complete this IQ will have a better understanding of what we mean when we talk about European modernity, modernization, and modernism and a better sense of how works of art, literature, and philosophy both reflect and help to shape the historical epochs out of which they emerge.

Note: Students complete two courses, each from a different department outside of their major.

The Development of U.S. Democracy (HUM, LCD, SSC)

What does it mean to live in a democracy? In what ways are the institutions of government bound by the wishes of American citizens, and in what ways does a broader culture inform how democracy takes shape? This IQ explores those questions through courses that consider the complex ways that Americans have conceived of the relationship between citizens and their government. While some courses examine the formal structures of that government, others consider how democracy takes shape through forms of culture that exist outside the familiar definitions of politics.

How do humans interact with the natural world? The courses in this IQ investigate the dynamic and highly interdependent nature of the natural and social systems that shape the Earth's environment as well as the profound impact of humans on the diversity and distribution of life on Earth. Students who complete this IQ will better understand how environmental issues transcend traditional disciplinary and political boundaries.

Ethics and Morality (HUM, LCD, SSC)

What is a good life for a human being? What do we, individually and collectively, owe to other humans (and to non-human animals)? How can social institutions (such as government or religion) help us to lead good lives and meet our moral obligations? Courses in this IQ expose students to historical and contemporary debates about these fundamental questions from a variety of secular and religious perspectives. Students will be introduced to rival accounts of virtue, arguments about the source and content of our rights and duties, and diverse understandings of the meaning and purpose of human lives.

Note: Students complete two courses, each from a different department outside of their major.

Forms of Creative Expression: Theory and Practice (HUM, LCD)

How does a poem, sonata, pas de deux, or play mean? How does writing a play, making a film, choreographing a dance, or composing music help us to understand these forms from within? By theoretically and practically engaging dance, film, theater, music, or creative writing, one develops the body, the emotions, and the mind in new ways. The arts do not merely reflect culture and knowledge; they create new ways and forms of knowing and feeling, and they are, therefore, vital engines of cognition. They require imagination, cunning, the control of resistant materials, empathy, and the ability to both master and violate conventions. Students taking this IQ will appreciate the rich theoretical dimensions of art forms and, by making art, learn how to match the stuff of raw inspiration with material form.

Note: Students complete two courses, each from a different department outside of their major. Students who are placed by the Dance department into higher-level courses should speak with their advisor about obtaining an override.

The Individual and Society (HUM, LCD, SSC)

How do societies structure and shape the lives of their members? Courses in this IQ analyze the ways in which individuals are impacted by social institutions, including both formal institutions (such as government, the economy, and schools) and informal institutions (such as religious and cultural norms). Social institutions play a major role in determining our options, guiding our choices, and endowing our actions with meaning. Social institutions create differences between individuals (especially by producing and reproducing inequalities of status, power, opportunity, income, and wealth), but those same institutions also create similarities among a society's members (in their behavior, beliefs, values, identities, tastes, and habits). Students who complete this IQ should improve their understanding of how social institutions work, where they come from, and how they change. Students should also improve their ability to reason about whether and how particular social institutions should be changed.

Note: Students complete two courses, each from a different department outside of their major.

Language: Theory and Practice (HUM, LCD, SSC)

How can people effectively use language to convey their thoughts, feelings, and beliefs? What properties of language allow it to be used so creatively? How do children acquire language in the first place? The courses in this IQ examine language from a variety of perspectives. They examine the structures of language itself: the sounds, phrases, and sentences that convey meaning; they examine the role of language in effective communication; and they examine the properties of the mind responsible for language.

Life and Physical Sciences (NSM)

What are the fundamental principles upon which advanced scientific knowledge is based? How are these principles, drawn from different academic fields, related to each other? This IQ provides students with a rigorous introduction to the life and physical sciences, teaching both principles and applications of foundational scientific knowledge. Moreover, the concepts taught in these courses reinforce each other, such that students pursuing this IQ will gain a better understanding of how one discipline complements and completes the others. Because advances in medical and biomedical science rests upon the introductory material explored in this IQ, it is an excellent inquiry for life sciences students not majoring in one of the natural sciences.

Note: Students complete two courses, each from a different department outside of their major.

Mind, Brain, Cognition (HUM, NSM, SSC)

How do we perceive, remember, and think? What is the relation of the mind to the brain? These questions are addressed in cognitive science, an interdisciplinary field that combines philosophy, psychology, neurobiology, and computer science. In this IQ, you will be exposed to recent empirical research and theory in which new avenues have been opened for understanding the nature of consciousness, our ability to use and understand language, varieties of memory, the functional organization of the brain, the nature of reasoning, and how perceptual experience may vary across individuals.

Modes of Inquiry and Analysis (NSM, SSC)

In a world in which we are bombarded by information, how can data best be evaluated and interpreted? How can we determine the nature of relationships between variables? Students who explore this IQ will be able to think critically when confronted with a wide variety of information. In addition to learning to evaluate the claims of others, students will also learn to interpret, summarize, and effectively communicate information themselves.

Note: Students complete two courses, each from a different department outside of their major.

Race and Ethnicity in America (HUM, SSC)

How have encounters among diverse peoples affected the historical, political, and artistic landscape in America? Is American "exceptionalism" a product of such encounters? How should we consider the ideal of "America" as a conceptual construct in light of the legacies of genocide, slavery, and discrimination? The courses in this IQ investigate the varied roles race has played in shaping history, politics, and arts in America. By completing it, students will have a deeper understanding of and a more nuanced appreciation for the roles and contributions of race to American culture and society.

Note: Students complete two courses, each from a different department outside of their major.

Science and Society (HUM, NSM, SSC)

What does science teach us about the natural world, and how should we integrate that knowledge into our decision making? In the last century, systematic scientific investigation has given us great insight into the world around us and great power to influence it to our benefit. Students investigating this IQ will explore that knowledge and grapple with deeper questions that science raises, including our understanding of our place in the universe, how to evaluate our own impact on the world, and how to make responsible use of the scientific knowledge we are acquiring.

Note: Students complete two courses, each from a different department outside of their major.

Understanding the Natural World (NSM)

How did the Universe, Earth, and life come to be, and what are the fundamental principles that govern their structure and function? The courses in this IQ investigate the basic biological, chemical, physical, and geological aspects of the natural world. Students who complete this IQ will be able to engage in the process of scientific inquiry and have an informed and interdisciplinary understanding of the scientific approach to describing, classifying, and interpreting natural phenomena.

Western Roots (HUM, LCD)

What conditions and concerns shaped the history, literature, and art of the ancient Mediterranean world? Why did the cultures of Greece, Rome, and the Near East come to inspire key Western institutions and values? What do we gain by studying ancient cultures, not just as our monolithic "foundations" but also with an appreciation for the alien, the inconsistent, and the ambiguous? Our cultural ancestors prove most valuable when we recognize this range of qualities in them, and the courses in this IQ give students the critical tools to do so. Students who complete this IQ acquire a deeper knowledge of one or more of the "foundational" ancient Mediterranean cultures and, in the process, learn to interpret both textual and material primary sources.

Note: Students complete two courses, each from a different department outside of their major.

World Arts and Letters (HUM, LCD)

What do we gain from an encounter with other cultures? Anthropologist Margaret Mead observed the following: "A knowledge of one other culture should sharpen our own ability to scrutinize more steadily, to appreciate more lovingly, our own." The courses in this IQ will help students broaden their horizons as global citizens, introducing them to the richness and diversity of other cultural traditions — some diametrically different from their own and others surprisingly similar. These courses address a wide range of forms of cultural production

within these traditions, from literature, cinema, and music to the performing arts, architecture, and material culture. Students who complete this IQ will be challenged to grow as individuals with a greater appreciation of their own cultural heritages.

Note: Students complete two courses, each from a different department outside of their major.
