

# Foundations of Counseling Psychology and Behavioral Health, BSIS

The **Bachelor of Science in Integrated Studies: Foundations of Counseling Psychology and Behavioral Health** is designed for modern learners who are looking for applied study experience in pursuit of careers in social work, counseling or related roles in healthcare. The program's courses introduce students to clinical psychology, counseling, and social work and provide the tools students need to understand research and its application to future practice. Elective courses allow students to explore areas of interest that correspond with local need. For example, students who wish to work with the growing population of older adults might take Developmental Psychology, Social Gerontology, and Psychology of Aging.

**Note:** Completion of this program does not make students eligible for any professional licensure status.
